

# Marblehead

*Marblehead ECO is the world's first sailcloth made from fully recycled fiber!*

After a comprehensive search of materials across the globe, and a lot of testing, Challenge has been able to source recycled polyester that has equal properties to virgin fiber, which has not been possible in the past. This allows us to launch Marblehead ECO with full confidence it is exactly equal to other styles in our successful Marblehead line in terms of performance, durability and UV resistance.

There is little excuse now, not to use recycled sailcloth in polyester/Dacron cruising sails. This is a breakthrough in woven sailcloth. Challenge is offering these leading-edge recycled fabrics at a similar price point as our standard polyester wovens. At Challenge we believe that real sustainability is using recycled materials, not just purchasing carbon offsets to claim green credentials. Marblehead ECO is an AP style fabric.

*Using Marblehead ECO in a 40' boat mainsail saves 2,336 plastic bottles from the ocean and landfills.*

Fabric ID	Description	Recycled % of Fiber	Yarn Denier Warp   Fill	Fabric Width in   cm
D6.47ECO	6.47 Marblehead ECO	50%	250   400	54   137
D7.47ECO	7.47 Marblehead ECO	100%	300   500	54   137
D8.47ECO	8.47 Marblehead ECO	100%	300   720	54   137
D9.47EPO	9.47 Marblehead ECO	100%	300   940	54   137
